

KCF Technologies Asset Case Studies

CNC Machine

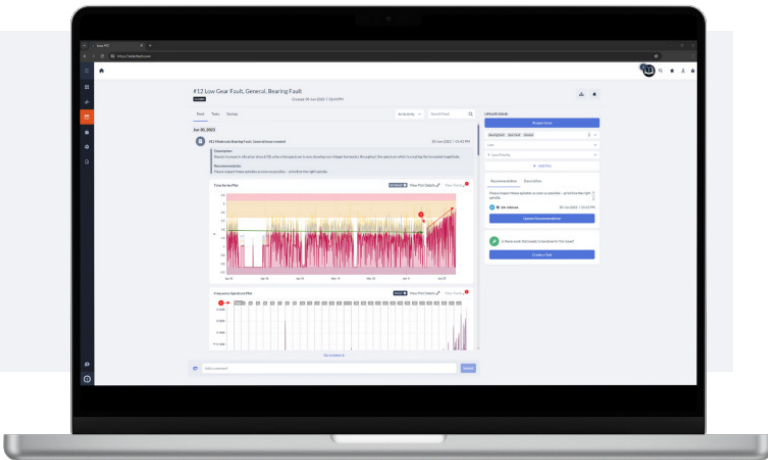

It's not enough to simply know that an asset is failing. Our team of engineers, vibration analysts, and industry experts with decades of manufacturing experience use cutting edge predictive maintenance technology to partner with you to solve your asset problems permanently and reach peak performance.

The Problem:

A SENTRY Analyst detected an increase in acceleration readings late June, and opened a new issue in Desk. After investigation by the plant's maintenance team, the right spindle had been found to be deteriorated.

How We Solved It:

To fix the issue, the spindle and spindle motor were replaced and new lubrication lines were added for both.
